

A kid that spent half his day for 6 years in a Special Education Class joins forces with a kid that spent the last 6 years of his schooling doodling. The outcome is a series of books, movies, plays, TV shows, and over a million jobs that leads to how to solve 3 trillion-dollar problems using the same dollars.

Einstein said, "Imagination is more important than knowledge." Picasso said, "It took me 4 years to paint like Raphael and a lifetime to paint like a child." What if solving trillion-dollar problems required adults to imagine like a child, and spend a lifetime being one. Men have an advantage; they never grow up. Women have an advantage over men. You can tell a man a thousand times and he would practice it once or you can tell a woman once and she will practice it a thousand times.

How do you get newspapers to see three years into the future with the biggest story of the 20's and it runs into the 30's and beyond with Artificial Intelligence, would any paper listen in 2019? A group of papers are being offered a front row seat in the creation of a multi-billion-dollar company built on \$10 movie ticket in advance to see 3 "G" rated movies containing acting, animation, and some documentary. This is real reality with 21 million people in two neighborhoods with imagination.

You would not be surprised if the LA Times or the Chicago Tribune won a Pulitzer. But what about the Desoto Times – Tribune of Hernando, Mississippi, the Pinckneyville Press, Pinckneyville, IL and the DuQuoin Call, DuQuoin, IL. Co-creator of Make a Movie, Watch a Movie expresses the offer, "All The Last Responders can do is put you in the right place at the right time to fulfill a dream or need. In the case of Governor Newsom of California, he is requesting another \$500 million for the homeless. Three movies can provide half that sum at a cost of less than \$10 million each. As for Perry County Illinois, the need is \$1.3 million a year for 3 years so the residents can better prepare for a future. In Mississippi, the story is one of caring and sharing. The state that leads the nation year after year in giving is Mississippi. Perhaps we could somehow say thank you with an offer for economic growth."

America has always faced problems head on until recently. Today, we kick the can down the road and force the future generations to pay the price. The price has grown to the point that the interest to solve a trillion-dollar problem is greater than the cost to solve the problem. By bundling solutions to affordable housing and cutting student loan debt, we can preserve the baby boomer legacy buy using 1% of the boomers giving over the next 20 years. Making sure the boomers are not the last generation to live better than their parents will be the greatest journey the boomers will travel. Solving 3 problems with the same dollar and leaving \$300 billion for the great grandchildren of the boomers that help.

Remember that world imagination. That is where an investigative reporter comes in that can inspire a newspaper to try to follow the imagination of those with disabilities and chronic illnesses as they create a story of value that changes the world while creating a trillionaire.
